GLOBAL SYSTEM OF TRADE PREFERENCES (GSTP) NEGOTIATIONS: PRODUCTS OF INTEREST TO AFRICAN COUNTRIES

TABLE OF CONTENTS

		Paragraphs
I.	INTRODUCTION	1 - 5
II.	AN ANALYSIS OF GLOBAL PREFERENCIAL SCHEMES OF AFRICAN INTEREST	6 - 17
	(i) African countries within the context of GATT	7 - 10
	(ii) The Generalized Scheme of Preferences (GSP)	11 - 14
	(iii) Preferences of the European Economic Community (EEC)	15 - 17
III.	GSTP WITHIN THE FRAMEWORK OF THE AFRICAN SUBREGIONAL GROUPINGS	18 - 29
	(i) Global System of Preferences (GSTP) among Developing Countries	18 - 21
	(ii) GSTP within the context of African trade and economic groupings	22 - 29
IV.	THE RELEVANCE OF GSTP IN AFRICA'S TRADE	30 - 32
V.	SELECTION OF PRODUCTS OF AFRICAN INTEREST TO BE NEGOTIATED IN THE FRAMEWORK OF GSTP	33 - 37
	(i) Criteria for selection of products	33 - 35
	(ii) Initial list of African commodities for GSTP negotiations	36 - 37
VI.	AFRICA'S NEGOTIATING STRATEGY ON GSTP	38 - 54
	(a) Tariff concessions	40 - 44
	(b) Non-tariff measures	45
	(c) Direct trade measures	46 - 47
	(d) Rules of origin	48 - 52
	(e) Transnational corporations	53 - 54
VII.	CONCLUSIONS AND RECOMMENDATIONS	55 - 60

INTRODUCTION

1. This study has been prepared pursuant to the decision of the Seventh session of the Conference of African Ministers of Trade held in February 1982 which inter alia, requested the ECA secretariat to: (i) continue to provide all necessary assistance to African delegations participating in global meetings on Economic Co-operation among Developing Countries (ECDC); and (ii) conduct a study to identify those products of interest to African countries and which would be the subject of a Global System of Trade Preferences among Developing Countries (GSTP)s. 1/

2. Trade is an important sector among the programmes adopted by developing countries within the context of promoting economic co-operation among themselves. It is generally agreed that certain instruments are needed in order to fully exploit the potential of South-South relations with a view to bringing about overall trade expansion among them. 2/ There is the need to take concrete measures to achieve this objective and to overcome some of the inimical factors inhibiting orderly development of mutual trade between developing countries. It was with this purpose in mind that the Global System of Trade Preferences among Developing Countries (GSTP) was launched. The principle guidelines for GSTP are elaborated in the Arusha Programme for Collective Self-Reliance. 3/

3. Since the meeting of the Group of 77 held in Manila in 1976 4/ and the adoption of Arusha Programme for Collective Self-reliance, a series of meetings of members of the Group of 77 have taken place at various levels. The main objectives of the meetings have been to strengthen the negotiating capacity of the developing countries with the developed countries and to find ways and means of reducing dependency on the latter while at the same time intensifying trade and economic linkages among themselves. These meetings also provided a forum for harmonizing the interests of the developing countries.

4. It was against this background that the chairman of the Group of 77 presented to the 37th session of the Economic and Social Council, the report of the Economic and Social Council Launching of Global Negotiations on International Economic Co-operation for Development: Development and International Economic

4/ Manila Declaration and Programme of Action Meeting of Group of 77 on ECDC: (1976), Group of 77 adopted the Arusha Programme for Collective Self-Reliance, 1981 and the Group of 77 in Caracas endorses the programme of 1981.

Co-operation which clearly outlined the Ministerial Declaration on GSTP.[5] Similarly, during its nineteenth session, the Economic Commission for Africa also adopted resolution 517(XIX) calling upon the OAU and ECA secretariats to assist African countries in preparing for international negotiations and to define a strategy for the negotiations.[6]

5. The study focuses attention essentially on the relevance of GSTP to African countries with a view to assisting the member States in adopting appropriate negotiating strategies, taking account of the global preferences from which they already derive benefits. The study is divided into four parts. The first part is a brief analysis of some global preferential schemes of presumed benefit to developing African countries. The second part, reviews the state of African subregional groupings, their current achievements and future prospects. The third part outlines the relevance of GSTP in African trade while part four attempts to identify a list of commodities which could be considered in the initial stages. The final and last part consists of suggested possible negotiating strategies together with concluding observations and recommendations for future action in this area.

II. AN ANALYSIS OF GLOBAL PREFERENTIAL SCHEMES OF AFRICAN INTEREST

6. African countries, in line with other countries, have been involved in various global preferential negotiations as a means of improving their export performance.

(i) African countries within the context of the GATT

7. The bulk of international trade is regulated under the General Agreement on Tariffs and Trade (GATT). GATT has two groups of membership. One group consists of *de jure* contracting parties which enjoy full benefits and the other countries which maintain a *de facto* membership or abide by its rules. In 1984, Africa constituted about 30 per cent of the former and 40 per cent of the latter. It is quite likely that some of the countries in the latter category would in due course become *de jure* members.

5/ See Document A/37/544 of 14th October 1982.

6/ ECA Annual Report, 3 May 1983 - 28 May 1984, E/ECA/CM.10/38, p. 127.

8. The GATT structure includes the Committee on Trade and Development which is responsible for reviewing, discussing and negotiating issues of trade interest to developing countries. It is within this framework that the Protocol Relating to Trade Negotiations among Developing Countries was adopted in 1971. The Protocol came into effect in 1973 in an attempt to increase trade among developing countries. However, only Egypt and Tunisia are members of this GATT Protocol.

9. The Protocol is overseen by the Committee of Participating Countries. It is an autonomous preferential trading arrangement providing for an exchange of mutually advantageous tariff and trade concessions among developing countries. Its basic aim is the expansion of mutual trade among all developing countries taking into account their individual development, financial and trade needs, through reduction or elimination of tariff and non-tariff barriers.

10. Another aspect of the GATT was the creation of the Consultative Group of Eighteen in 1979 as a permanent body consisting of high-level officials responsible for trade policies in each country. 7/ However, the Group's deliberations are not legal but are merely a check on the consistency of trade measures within the GATT obligations. Thus, developing countries do not obtain redress to their problems in this group.

(ii) The Generalized Scheme of Preferences (GSP)

11. The Generalized Scheme of Preferences (GSP) was developed within UNCTAD to encourage export expansion of manufactured goods by developing countries. UNCTAD resolution 21(II) incorporates the provisions of the Charter of Algiers of 1967, by reiterating the objectives of GSP which are to: «increase export earnings; promote industrialization and accelerate the rate of economic growth of developing countries». After several negotiations, especially at its fourth special session, the UNCTAD Trade and Development Board in its Decision 75(S-IV) adopted the report of the Special Committee on Preferences. Subsequently, the General Assembly in declaring the Second United Nations Development Decade included the preferential trade arrangements as an integral part of the Development Strategy.

12. Presently, 19 developed market economies and 6 socialist countries of Eastern Europe subscribe to the GSP. There are over 125 developing countries who are beneficiaries of the Scheme. The least developed among the developing countries participating in these schemes are in some respects entitled to further concessions or more preferred advantages.

7/ The membership composition of the Group in 1983 and 1984 included three African countries - Egypt, Nigeria and Zaire.

13. Since the GSP scheme was started, developed (offering) countries have continued on the whole to improve their offers. However, the main characteristics still persist. For instance, there are wide variations among offering countries of share of GSP most favoured nations (MFN) clause to product lines coverage. The percentages in 1980 ranged betwe.. 38 for Finland to 90 for Switzerland. In terms of the Brussels Tariff Nomenclature (BTN) Chapters 1-24 where the bulk of African products concentrated, these are affected by restrictions of the EEC under the Common Agricultural Policy and USA graduation. For example, African exports of meat, fish, fruit, tobacco cocoa butter and soluble coffee are under quota system and carry a high tariff rate in the EEC. Benefitiaries to the USA system are subjected to differential treatment depending on their level of development.

14. A matter of great concern with regard to the application of GSP is the shallow level of tariff cuts. It is generally agreed that GSP effectively stimulates export oriented industries or production through advantages in competitiveness. However, experience shows that developing countries are under internal pressures not only with regard to the depth of tariff cuts but also with regard to a variety of safeguard mechanisms such as the rules of origin which are designed to protect sensitive productive sectors in the offering countries. Thus, GSP has in practice become a "window dressing" facility because developing countries, especially in Africa, cannot fully benefit from this arrangement due to the countervailing protectionist policies imposed by offering developed countries.

(iii) Preferences of the European Economic Community

15. The economic relationship between the European Economic Community (EEC) and 66 States of Africa, Caribbean and Pacific (ACP) under the three Lomé Conventions includes non-reciprocal trade preferences by the developing countries. It is important to note that the agreements have been tailored not to contradict the provisions of the GATT and as such, they are not fully geared to Africa's advantage.

16. Nearly all exports of agricultural and primary commodities to EEC from African countries under the Lomé Convention receive duty free treatment except for those excluded under the Common Agricultural Policy. With regard to industrial products, all of them receive full preferential treatment under the Lomé Convention as long as such products can meet the conditions laid down under the rules of origin.

17. It should be recognized that African countries under the Lomé Convention compete with preferential benefits offered by the EEC market to a large number of other countries or regions which are not included in this arrangement but with which the EEC has negotiated preferential arrangements. These include Latin American countries, the European Free Trade Area (EFTA) Mediterranean countries

and of late some countries of the Association of East Asian Nations (ASEAN). It is noteworthy to underscore that considering the volume of trade in products which are of export interest to ACP countries (of which Africa is a party), the share of ACP countries in preferential market in EEC was about 18 per cent in 1976 while that of EFTA was 30 per cent, GSP benefitiaries 34 per cent and Mediterranean countries 18 per cent.

III. GSTP WITHIN THE FRAMEWORK OF AFRICAN SUBREGIONAL GROUPINGS

(i) Global System of Trade Preferences (GSTP) among Developing Countries

18. As was stated earlier, one of the major objectives in establishing the global system of trade preferences among developing countries (GSTP) is to stimulate, diversify and stabilize export growth between developing countries and reinforce collective self-reliance of the countries of the South. Preferential measures such as tariff reduction and non-tariff barriers when combined with mechanisms of payment and export credit arrangements with other sectoral development co-operation activities could go a long way in establishing and increasing trade flows among developing countries. It would also in the long run accelerate economic growth for the participating countries. There is ample evidence, especially from the studies undertaken by UNCTAD to show that existing trade barriers among developing countries are partly responsible for the low level of trade between them. 8/

19. The effect of tariff, import charges and non-tariff barriers is to make imports uncompetitive or outrightly exclude them from the domestic market of the country imposing the barriers. Non-tariff barriers include government participation in trade through preferential purchasing, restrictive practices, customs and administrative import procedures, technical barriers to trade, quantitative restrictions and charges to imports such as import deposits and credit restrictions. These measures are implemented through administrative controls and as such ensure a direct effective control on imports. Tariffs and related levies on the other hand indirectly influence control of imports through the price - cost mechanism. Thus, a price increase as a result of an increase of tariff may not outrightly curb imports whereas a quota restriction or import licensing will control the volume of imports in the country.

8/ UNCTAD, Trade among developing countries by main SITC groups or by regions, TD/B/C.7/21, Chapter VII.

20. The establishment of a global system of trade preferences among developing countries is likely to overcome tariff and other trade services as well as problems of economic and structural production capacity facing the developing countries. Where preferences are agreed to on a product-by-product basis, this would stimulate the establishment of productive capacities in certain sectors of the economy. GSTP should be based on sectoral development so that the economic and trade structure of the countries concerned could increasingly be transformed from primary to semi-manufactured or industrial goods. Besides geographic and production diversification, coupled with the stable price system offered by the nature of manufactured goods to be traded. GSTP would help developing countries to protect themselves effectively against adverse developments in world trade.

21. It is therefore important to strengthen the objective of GSTP as a long-term development objective of developing countries. Products or groups of products of interest to contracting parties have to be identified bearing in mind the fact that industrial growth of developing countries will largely depend on their collective efforts. All groups of countries and regions have to benefit equitably from GSTP scheme. In response to the decision taken at Mexico City Conference of September 1976, concessions are to be offered to least developed countries to enable them to realize accelerated rate of industrial development without which their interest in GSTP participation will not be forthcoming. 9/

(ii) GSTP within the context of African trade and economic groupings

22. GSTP has special relevance to African trade and economic groups. As will be recalled, the Lagos Plan of Action committed the member States to set up an African economic community by the year 2000 through the establishment of new regional structures and by strengthening existing ones as a first step in creating an African Common Market. Furthermore, Lagos Plan of Action calls for harmonization of strategies and policies with regard to economic development and promotion of joint ventures in several sectors. The key element in these co-operative programmes is a better integration of resources endowment exploitation with a view to achieving fast and sustained rates of economic development. 10/ In the area of trade, the Lagos Plan of Action proposes, inter-alia, the creation of favourable conditions for expansion of intra-African trade and international trade, by eliminating trade barriers and establishing multinational corporations. GSTP would therefore be an effective mechanism for achieving these goals.

9/ See TD/B/C.7/35, p.1.

10/ Plan of Action for the implementation of Monrovia Strategy for the Economic Development of Africa, ECA, 1979.

23. There are now several regional and subregional economic groupings within Africa which could be harnessed to speed up the process of regional co-operation and integration through GSTP. Most of these groupings were formed in the mid-seventies, except the Central African Customs and Economic Union (UDEAC) and the West African Economic Community (CEAO), which were established in the pre-independence period. 11/ The following groupings can be easily adjusted as vehicles for implementating GSTP within the African context: the Central African Economic and Customs Union (UDEAC); the West African Economic Community (CEAO); the Economic Community of West African States (ECOWAS); the Mano River Union (MRU); the Economic Community of the Great Lakes Countries (CEPGL); the Economic Community of Central African States (ECCAS); the Preferential Trade Area (PTA) of the Eastern and Southern African States; the West African Clearing House; the Central African Clearing House; and the Southern African Development Co-ordinating Committee (SADCC).

24. Since the early 1960's, there has been acceptance of economic co-operation or regional integration as the most effective method of enhancing economic development in the African countries. By the same token, such co-operation would also enhance the realization of the objectives of GSTP. It is important to stress however that economic co-operation as a tool for economic development would not have the same impact in all developing countries. 12/ As such, it is to be expected that some countries would benefit more than others at given periods in the process of integration.

25. Three broad objectives for economic co-operation among developing African countries can be discerned. The first objective is to increase trade among them by offering tariff and non-tariff concessions as those envisaged within GSTP, so that the products originating from participating countries are not subjected to quantitative restrictions and at the same time enjoy a price advantage over products originating from third countries. The tariff and non-tariff concessions are further reinforced with the adoption of a common external tariff within the regional grouping. Secondly the enhancement of subregional groupings in sectoral development particularly in agriculture, industry and transport and communications, with a view to achieving their economic growth and development. This objective enables the countries in the subregion to transform their production and consumption structure, to strengthen economic interdependence and complementarity. The third objective is to enable the least-developed, landlocked and island states to form integral part of the co-operation arrangement and hence reap the benefits of collective self-reliance ventures.

11/ For a full analysis of trade groupings, see Jonathan H. Chileshe, The Challenge of Developing Intra-African Trade, East African Literature Bureau, Nairobi, 1977, pp. 154-187.

12/ For a full treatment of African regional economic co-operation, see B.W.T. Mutharika, Towards A Multinational Economic Co-operation in Africa, Praeger, New York, 1972, pp. 20-27.

26. Although some of these groupings have shown significant progress in the operation of their schemes, it is felt that the introduction of GSTP would further enhance the process of trade expansion. In the UDEAC, for instance, the share of intra-union trade grew from 4.7 per cent in 1960 to 7.4 per cent by 1973.13/ However, it declined to about 6 per cent in 1977 and in 1983 it constituted a mere 2.4 per cent. 14/ This was particularly the case with regard to industrial products which responded favourably to the single tax regime. In the meantime, the period after 1972 has not shown much growth in intra-community trade because «single tax» did not reduce competition from industries outside the area.

27. Generally speaking, intra-subregional trade still constitutes a small magnitude in total community exports. For instance, intra-subregional trade within ECOWAS amounted to about 3.5 per cent during the last decade (in 1983 it equalled to 3.4 per cent). For Mano River Union, on the other hand, it rose slightly from 0.2 per cent in 1975 to 0.34 per cent in 1983. As it was observed in the African trade structure, there has been a general decline in the rate of growth of intra-African trade. Moreover, it fell by more than 17 per cent in 1982 to reach the level of 2 billion dollars. 15/ It is apparent from the above assessment that a lot needs to be done to raise the level of intra-subregional trade.

28. Apart from the integration grouping with objectives of trade expansion through liberalization, there are those meant to meet specialized objectives such as harmonization of subregional payments arrangements. The West African Clearing House (WACH), the Central African Clearing House (CACH) and the PTA Clearing arrangement, are such groupings. Their specific objective is to promote the use of the currencies of member States for subregional trade transactions and then to reduce the constraints on the balance of payments resulting from settlement of trade balances through use of foreign currency reserves. As such these would be re-inforced by the GSTP.

29. Preferential concessions within the subregional groupings consist of gradual removal or extensive reduction in tariff and non-tariff barriers with an established common external tariff. The scope and depth of these preferences differ between subregional groupings. For instance, tariff and non-tariff barriers of the PTA are less liberal but more pragmatic than is the case under ECOWAS and ECCAS. All

14/ Calculated on the basis of «IMF Direction of Trade Statistics Yearbook 1984.»

15/ ADB/ECA Economic Report on Africa, 1984, p. 16.

subregional groupings have established rules of origin to safeguard their preferential and mutual interest. One of the rules specifies that products have to be produced by national enterprises whose equity and the majority of management is national. This rule excludes the operations of the transnational corporations (TNC's) and their dominance in member country economies and therefore ensures that the benefits would accrue to the subregional groupings with less external interference.

IV. THE RELEVANCE OF GSTP IN AFRICA'S TRADE

30. The analysis of Africa's trade structure shows that the external trade is characterized inter alia by heavy reliance on raw material and agricultural products for major part of export earnings, and by the importation of a wide range of manufactured goods including food. This pattern of trade has over the years led to strains and stresses on the African economies which constitute the basic motivation for GSTP. The need to transform this structure and to make the economies less dependent on the industrialized countries as a major source of economic growth and stability have necessitated the establishment of GSTP as an instrument that could possibly stimulate trade among developing countries.

31. The relevance of GSTP becomes more pronounced because Africa's exports of manufactures have stagnated around 6 per cent of total exports basically because the African production structure has hitherto been geared to supplying primary products to the industrialized countries. The continuation of this pattern of production and consumption contributed to Africa's low industrial base. To make matters worse, the developed countries have discouraged the development of production of industrial processed and semi-manufactured exports from developing African countries. This has been achieved through protectionism. Thus, the difficulty of market access for Africa's manufactured and processed products in the developed countries is of paramount importance in the programme for GSTP.

32. Essentially, two policy measures are needed to overcome these obstacles: (a) Africa must first develop her industrial base utilizing her abundant natural resources and (b) find access to other markets for her manufactured and semi-manufactured products. To that end, GSTP has a special appeal to African countries since this would enable them establish export programmes in manufactures and eventually to overcome their structural weakness attributable to their dependency on the exports of primary commodities. Another importance of GSTP to Africa is that it will open up avenues for multilateral trade negotiations in the field of manufactured products. Since the prices for manufactured goods are more stable than those of primary commodities, increased trade through GSTP will ensure stable and expanding export earnings of African countries.

V. SELECTION OF PRODUCTS OF AFRICAN INTEREST TO BE NEGOTIATED IN THE FRAMEWORK OF GSTP

(i) Criteria for the selection of products

33. The criteria for selecting products for inclusion in the negotiations for the GSTP will need to take into account the structure of production, the current and future consumption patterns of the African countries. Furthermore, the selection of products should pay attention to overall balanced development, trade stability and economic growth at the national, subregional, regional and interregional levels. In particular, the criteria should aim at identifying:

(a) products that will increase Africa's share of total world exports especially of manufactured and intermediate goods;

(b) products which will increase and maintain a dynamic market penetration in other developing countries so as to foster industrial production and export diversification;

(c) products that will promote trade within the subregions to fulfill the priorities of the Lagos Plan of Action. To this end, efforts should be made to identify deficit and surplus commodity areas which could satisfy subregional demand and self-sufficiency in basic commodities such as food.

34. Another consideration is that in selecting products for GSTP negotiation, regard should be given to commodities or products which are strategic for the economic development, sustainance and social stability. For this reason, agreement to establish GSTP between subregional groupings or within a regional grouping should focus on comprehensive mechanisms for sectoral planning and trade linkages satisfying consumption requirements in food, clothing, housing, education and health.

35. With regard to interregional trade, the criteria should aim at reducing Africa's dependence on primary commodity exports by ensuring that other developing countries accept African goods. The list of products to be traded between Africa and other developing regions should be based on full reciprocity. Moreover, in view of the fact, that the newly industrializing countries of Asia and Latin America are likely to increase their demand for Africa's raw materials, Africa should insist that its products in processed and semi-manufactured state should constitute an integral framework for GSTP.

(ii) Initial list of African commodities for GSTP negotiations

36. Even under the current production patterns of the region, a tentative list of available and potential products can be established for the GSTP scheme. In this regard, it is worthwhile to briefly review some of the factors which are likely to act as a stimulus to Africa's export capacity in view of the region's comparative advantage in certain products. These factors include:

(a) total and per capita rates of growth as indicators of increased aggregate and sectoral demand. With regard to sectoral demand, manufactured consumer goods would include high quality processed foodstuff, footwear, clothing and textile fabrics, iron and steel fabricated products, machinery and equipments, building materials and domestic appliances;

(b) labour and skill intensive products such as hand tools, domestic appliances, electronic equipments, clothing and footwear and toys, could raise the industrial base of some African countries particularly in countries where export growth has been demonstrated;

(c) different natural resources and factor endowment provide a basis for specialization as well as complementarity. As investment and exploitation of enlarged markets are linked together through preferences, there is a strong incentive to create productive capacity to replace imports from third party sources. Imports from developed countries could easily be substituted if the regional markets could be geared toward trade preferences of the imports from the other developing countries;

(d) because of the low level of industrialization, high tariff and non-tariff protection of the industrial sector in most African countries, reciprocal reduction of these trade barriers would not only increase the flow of trade between co-operating countries, but would also provide a sound industrial base competitiveness since resources and factors of production would be utilized more efficiently;

(e) harmonization of fiscal, monetary and trade policies and the establishment of payments arrangements would go a long way in promoting mutual trade between developing countries.

37. Table 1 depicts agricultural and mineral commodities of interest to African countries which could be processed or manufactured for export to other developing countries co-operating in the GSTP system. A second category of products consists of industrial products which would require domestic and imported raw materials so as to diversify and broaden Africa's industrial base and the export structure.

TABLE 1

Major Exports and Imports of interest to Africa on which Intra- and Interregional negotiations on GSTP could be based

Commodity	Intra-Africa		Interregional to or from Asia, Latin America		To dev. market economies	Remarks
1. Meat bovine and mutton	X	M	X		X	To be based on surplus-deficit criteria
2. Fish tinned	X	M	X

VI. AFRICA'S NEGOTIATING STRATEGY ON GSTP

38. The joint report by OAU/ECA secretariats to the African Group meeting in Geneva, from 22 to 24 July 1981 analysed the elements of an African regional stand on GSTP. The report reiterated that while Africa was comitted to work within the framework of GSTP, her main concern was on the new structure that would evolve to take due cognizance of Africa's special situation. 16/ It is therefore necessary for the African countries to develop a viable negotiating strategy which can assure them that their concerns would be fully safeguarded in global scheme. Thus, as suggested earlier, the African negotiating strategy should be based on the framework established under the subregional groupings such as ECOWAS, ECCAS, PTA, SADCC and other preferential arrangements.

39. The report of the Economic and Social Council on Launching the Global Negotiations on International Economic Co-operation for Development, and International Economic Co-operation includes the Declaration made by the Ministers for foreign Affairs of the Group of 77 indicating that the first phase of the negotiations should include a limited number of components. 17/ Proposals should include tariff concessions, removal of major non-tariff barriers, direct trade measures including long term contracts, rules of origin and safeguards. It is therefore in the light of the above that an attempt is made in the subsequent paragraphs to show the merits of each of these elements. In the elaboration which follows attempts are also made to show what African strategy should be on each of them.

(a) Tariff concessions

40. The objective of tariff concessions is to lower the costs to exporting countries on those products for which tariff cuts are applied relative to products originating from third parties; alternatively to increase the sales of such products by the exporting countries. Decisions have to be made on whether tariffs should be reduced by linear that is identical across-the-board reduction or item-by-item approach or combination of the two. 18/

16/ ECA, Africa and a Global System of Trade Preferences among Developing Countries, (ST/ECA/WP.1/1).

17/ United Nations, Report of the Economic and Social Council on Launching of the Global Negotiations on International Economic Co-operation for Development: Development and International Economic Co-operation, A/37/544, 14 October 1982.

18/ UNCTAD, A Global System of Trade Preferences among Developing Countries (GSTP): Issues for consideration in preparing for GSTP negotiations, TD/B/C.7/42, para.37.

41. The effect of GSTP tariff concessions on the various economic integration groupings is difficult to judge with any degree of exactness. For those groupings that might have eliminated all tariffs on intra-group trade, the implementation of GSTP tariff preferences is likely to erode the existing preference levels enjoyed at the group level. For the integration groupings whose tariff preferences are at par with the levels proposed under GSTP, it might be necessary for such groupings to deepen the intra-group preferences or apply other liberalization measures to be able to enjoy the global benefits as well as those negotiated within the groupings. On the other hand, those groupings which are in the early stages of formation and whose tariff preferences have not and could not reach the level proposed by the GSTP, will need more carefully selected liberalization measures to maintain the groupings' interests.

42. Studies that have been undertaken by UNCTAD in this area advocate for the linear approach to tariff cuts because of its simplicity, wide product coverage and its assumed practical angle in the long run. 19/ However, this approach could turn out to be disadvantageous to some African countries. First because of the existing great disparities in tariff levels among African countries on one hand and other developing countries on the other hand. It is therefore not logical to advocate the adoption of linear tariff cuts since the economic and trade effects of linear cut on the 300 per cent tariff and on the 10 per cent tariff are not the same. Secondly, there are structural differences in foreign trade between the African and other developing countries, particularly the relatively more industriall advanced ones like the Republic of Korea, Singapore, Philipines, India, Brazil, Mexico and Yugoslavia. To adopt the same level of tariff cuts without due regard to the level of development between developing countries would mean sacrificing the basic interest of African countries in economic development, growth and structural transformation. Thirdly, the level of competitiveness of individual countries vary. Thus, a 5 per cent tariff concession does not have the same effect on Tanzania's manufactured exports as it would on manufactured exports of the Republic of Korea. Finally, there is dominance of agricultural and mineral commodity products which are of export interest to Africa and by their nature, these commodities attract low tariff rates in their unprocessed form.

43. The implication is that GSTP concessions would not benefit African countries unless there is also a structural adjustment and transformation in production and international trade. Emphasis must therefore be placed on the need for progressivel building linkages between tariff preferences and economic co-operation measures in such areas as production, marketing, payments, finance, transport. These measures would facilitate and bring about the prerequisite conditions for Africa's economic restructuring in production and trade thereby promoting balanced mutual interest between participating parties.

19/ See UNCTAD documents TD/B/C.7/42, Geneva, 27 July 1980 paras. 37-50, and TD/B/C.7/68, Geneva, 19 October 1984, paras. 47-51.

44. The strategy for tariff concession negotiations should be on product-by-product basis to enable African countries to identify and consolidate their benefits and to minimize the costs inherent in tariff reduction. Linear tariff concessions obscure the costs of tariff cuts because each product group has its characteristics and responds differently to tariff concessions. Moreover, the African countries should aim at linking the item-by-item approach to sectoral co-operation in industrial project development to be able to raise their industrial base and to diversify their exports into manufactured goods. In particular, Africa would greatly benefit through GSTP if preferential concessions are made for processed raw materials which have demonstrated a dynamic demand in the newly industrializing countries of South East Asia and Latin America. However, the long term objective would be to deepen the industrial base not to make the economies depend on the processing of raw materials for other industrial centres.

(b) Non-tariff measures

45. Non-tariff barriers applied by most developing and developed countries include quantitative restrictions, licencing requirements, health restriction protecting their domestic industries and allocation of foreign exchange. There is a divergence between countries in their reliance on the various non-tariff barriers which makes it difficult to apply a general approach to reduction in such barriers. However, in view of their impact on trade expansion among developing countries, they could be linked to the tariff concessions in such a way that countries which are least able to take advantage of the reduction in tariff concessions in the GSTP, particularly the least industrialized ones, could expect relaxation in quantitative restrictions from other countries that would benefit most from tariff reductions. In some cases, tariff cuts are ineffective when no provision is made for adjustment of non-tariff barriers (NTBs). This is because as explained earlier in this paper non-tariff barriers have equal if not more effective control on expansion of trade than tariffs.

(c) Direct trade measures

46. These would include, among others, negotiating multilateral long-term purchase and supply contracts and counter-trade which provide importers with assured supplies of specified commodities while at the same time assuring exporters with reliable markets for their products. This will be particularly useful in promoting products from African countries as a region beginning to industrialize. These measures are suitable for countries whose marketing activities are centrally organized in the form of State trading Organizations and public purchasing agencies. Large-scale transactions and standardized products are assured using such channels. However, this measure requires other supporting activities in the form of finance support and credit arrangements.

47. In addition to long-term contracts, other direct measures could include negotiating special programmes in the sectors of production, finance and technology aimed at enhancing industrial development of these countries. This could include setting up joint ventures between developing countries co-operating under the GSTP. Special attention needs to be given to the less developed member countries to enable them to participate and obtain benefits which match their aspirations. Joint ventures or complementary industrial projects could specifically be geared to production of goods which could be traded on a preferential basis thereby enabling such countries to widen their export and industrial base.

(d) Rules of origin

48. The rules of origin for GSTP will be based on the principle guideline which states that «participation in GSTP be reserved exclusively for developing countries, members of the Group of 77». In this connection, therefore, the rules of origin criteria should be flexible and development oriented. They must also ensure that the benefits and development processes accrue to participating countries on an equitable basis and not to only the newly industrializing developing countries at the expense of the relatively less industrialized countries.

49. The Group of 77 has drawn up Draft Rules of Origin for the GSTP which proposes nine (9) rules within which the originating products may be defined. There are at least three rules of specific interest to Africa. Rule 3 which deals with «not wholly produced or obtained» should provide for a lower percentage rate of local processing or a higher percentage of imported materials, with periodic review or graduation to enable the least developed countries, particularly African countries, to participate and gradually benefit from GSTP system of industrially produced goods. The lower percentage rate of local processing or value added should be granted on the criteria of least developed and/or low industrial base. Africa should negotiate for products traded within the framework of sectoral agreements negotiated under the GSTP - Rule 3(b). The purpose is that bilateral and multilateral arrangements should form part of GSTP to enable Africa to invest and develop programmes that would have export expansion implications.

50. Rule 4, «on Cumulative Rules of Origin» would benefit contracting member States. However, Africa should aim at «full cumulation» which means that «all value added originating in individual participating states may be cumulated or added up in order to determine whether the resulting product satisfies the origin rule».

51. Rule 8, on «Review» provides an open-ended aspect to incorporate or revise any aspect which might have arisen during the course of the initial or subsequent implementation of the GSTP system.

52. It is also important that the GSTP rules of origin should take into account the problem of landlocked countries by providing for the valuation of imports in the context of non-originating products at the sea port of importation. This has the effect of not inflating the value of imports with overland transport and other costs.

(e) Transnational corporations

53. Africa's economic activities, particularly in the monetized sector, are characterised by a high degree of involvement of transnational corporations (TNCs) at many levels. As such, special consideration would have to be given to their activities in the GSTP scheme. While TNCs are an agency of transformation and are even potentially benefitial to some African countries, the experience in many African countries as elaborated in certain ECA reports, has not always conformed to the noble path. 20/ Furthermore, their motives and their capacities to outwit the host countries and more so in the small and weak African countries, has had negative consequences to short and long-term development goals of these countries. Important economic sectors as manufacturing industries, production and marketing of major primary commodities including tea, coffee, tobacco, copper, cotton, bananas, tin, tropical hardwood, sugar, bauxite and other tropical fruit are under the grip of TNCs and may present problem in GSTP.

54. There is a strong need, especially because of the TNCs, for developing countries to strengthen or create entities which act as viable alternatives to TNCs. The strength of TNCs need to be taken into consideration when negotiations are taking place within GSTP because of their control of world production, marketing and in the financing of external and intra-firm trade. One particular consideration is for all countries, particularly developing states, to commit themselves to a code of conduct for TNCs in order to moderate their adverse effects while at the same time benefitting from their strength in all aspects of modern organization of efficient deployment of resources.

VII. CONCLUSIONS AND RECOMMENDATIONS

55. The identification of products of interest to the African region intended for GSTP negotiations need to be based on realistic evaluation and assessment of current

---

20/ ECA, Transnational corporation in Africa. Some major issues, E/ECA/UNCTAD/21; ECA, Report of ECA mission on the Evaluation of UDEAC and the feasibility of enlarging Economic Co-operation in Central Africa: To the Annual Conference of UDEAC Council of Heads of State, Libreville, Gabon, December 1981. See especially Part I, Chapter III, pp. 64-98.

and future production, distribution and market structures. Similarly, account ought to be taken of [illegible] rules of origin, payments arrangements and complementarity in investment. Since the African region has the largest number of least developed countries the issue of GSTP carries special significance. The region should therefore fully assess what aspects of GSTP are likely to help change the needed changes in it. trade structure and complement its development efforts. Considering that most African countries rely on exports of primary commodities, particularly agricultural raw materials and minerals, where tariff rates are already low in most major markets of Europe, North America and Japan, the solution needed for trade expansion is not necessarily tariff concessions. One of the most difficult aspect of GSTP in so far as Africa is concerned is the identification and negotiating non-tariff barriers related to quantitative restrictions and direct measures as they relate to processed and manufactured products.

56. The GSTP should not aim to complement and supplement the work being done by the existing integration groupings with a view to increasing their effectiveness. There is a need therefore for GSTP to be integrated within the efforts being undertaken at subregional and regional levels, so that the benefits from the scheme are utilized advantageously and promote growth.

57. The question of abolition of tariff and non tariff barriers in GSTP requires careful consideration. For instance, there is a need to establish new trade links among developing countries and with African countries in particular to take full advantage of GSTP. Similarly, there is a need to assess some of the implications from such reductions or abolition, weighed against any possible increase in trade. Some of these issues have to be viewed against the root causes of current low volume of trade among developing countries. After all the existence of excessively high tariff walls is not the sole reason for the low level of trade between Africa and the other developing countries. Thus, the removal of tariff and non-tariff barriers [illegible] measures which will promote trade expansion and development.

58. It is also necessary for developing African countries to relate the establishment of GSTP to their economic growth and development goals in terms of both their respective national development plans and the Lagos Plan of Action. To this end, GSTP should ensure the promotion of intra-African trade and co-operation, in particular the establishment of an African Common Market and an African Economic Community by year 2000.

59. In the light of the issues discussed in this study it is recommended for considerations by African countries that:

(a) all African countries interested in GSTP should provide standardized information such as specific products on which trade concessions are desired and the desired negotiating approach such as linear or product-by-product or sectoral and type of tariff rates to be negotiated. This should be in respect of products they are ready to import and those they are ready to export;

(b) an ad hoc working group of African experts including representatives of subregional economic groupings and where applicable African individuals, should be convened with the objective of fully analysing the GSTP as it applies to Africa within the context of the current economic and social crisis. The ad hoc group should also be requested to propose better ways of monitoring the progress in the implementation of GSTP schemes in so far as they affect the African countries. Its other tasks would include co-ordination and harmonization of activities before major international negotiations under GSTP as well as to identify commodities for specific market destinations or sources;

(c) further studies at the subregional and individual country levels need to be undertaken for the purpose of identifying and selecting commodities for exchanges for intra-African trade

(d) in order for Africa to obtain maximum advantages while minimizing its loss through offering GSTP, they should adopt a strategy of negotiating, offering, or requesting concessions under the umbrella of the major subregional groupings such as ECOWAS, ECCAS and PTA. In this way, some of their regional projects or programmes for structural transformation and production would not suffer unduly at the hands of more advanced and newly industrializing developing countries.

60. The complexity of GSTP negotiations necessitates the adoption of a more systematic approach and also programming the negotiation timetable in such a way that GSTP benefits can be realized to their full potential by all parties. There is, therefore, merit in a step-by-step approach as stipulated under the GSTP principles. African countries will also need the support of other countries in the initial period. This support is needed in their efforts towards building up fair base in their co-operation efforts in order to exploit the inherent potentials of ECDC. Similarly, GSTP should be linked with the Industrial Development Decade for Africa (1980-1990) which established a target for building up new and viable industries utilizing the region's own natural resources. Production resulting from these developments could be a potential element on which the African region may seek concessions within the GSTP.
